SureView Systems Honored with Government Security Award

Immix® platform recognized as Platinum-level winner

Tampa, Fla. (May 5, 2015) — SureView Systems, a global provider of commercial central station and enterprise command center software, announced today that it has been honored with the Platinum-level Government Security Award for its Immix® enterprise command center and central station software solution. The award program, presented by leading industry trade publication *Security Products*, recognizes outstanding products that address security and operational challenges in the government market.

A panel of expert judges selected SureView Systems based on the Immix platform's unique features, innovation, interoperability, quality, design, market opportunity and overall impact on the security industry. Immix was selected as the Platinum-level winner in the PSIM category.

"The Immix platform is a critical tool for cities, counties and other government entities that are using a large number of disparate systems to monitor the security of their enterprise organizations," said Rob Hile, Director of Enterprise Command Centers, SureView Systems. "This award provides further assurance that SureView delivers a complete and unified software solution to government entities so they can achieve real-time situational awareness of any security event while enabling on-demand sharing of important data across the entire network of first responders."

The Immix platform is listed as an authorized purchase under the U.S. Department of Homeland Security's Urban Areas Security Initiative (UASI) Grant Program, and SureView Systems has developed comprehensive UASI pricing packages available to support this effort. The program provides support for target hardening and other physical security enhancements to nonprofit organizations that are at high risk of terrorist attack and located within one of the specific UASI-designated eligible urban areas. The program is also designed to promote coordination and collaboration in emergency preparedness activities among public and private community representatives, as well as state and local government agencies.

The SureView Immix platform is a Web-based, networked software platform solution designed for enterprise businesses and central stations to protect critical assets. Its flexible architecture and large integration library also supports a rapid deployment model and strong return on investment.

About SureView Systems

SureView Systems is an industry-leading provider of command-and-control software for enterprise and central station environments. Its flagship solution, SureView Immix® is a comprehensive cloud-based software platform designed to integrate with multiple sensors, systems and devices to provide organizations with a comprehensive view of security profiles, risk management and business operations from a single, intuitive user interface. Immix is deployed successfully in a wide variety of environments including the central station, transportation, education and enterprise markets. SureView supports the largest integration library in the industry, enabling ease of deployment and system administration for a wide variety of organizations across the globe.
